

AI TRAINING · EXPERT PROFILE

Kevin Storm

Education and Dutch-language expert for AI training and evaluation

Snapshot

Native Dutch educator and curriculum designer with more than twenty years in the classroom, a specialism in special-needs and creative-media education, and hands-on experience building learning tools with AI. I evaluate and improve AI output for quality, pedagogy, factual accuracy, tone and accessibility, and I write and reason clearly in both Dutch and English.

Why I am a strong subject-matter expert

- Native Dutch (nl-NL). Fluent, publication-level written Dutch; I write a monthly column. Ideal for Dutch-language data, localisation, and nl-NL evaluation.
 - Education domain depth. Twenty years teaching and designing curriculum, from special education to international teacher training. I can judge whether an explanation actually teaches, not just whether it is correct.
 - Structured, critical feedback. My daily work is assessing output and giving precise, rubric-based feedback, exactly the skill these tasks reward.
 - Special-needs and accessibility lens. I catch where content fails the people who do not get it by default: clarity, reading level, tone, inclusion.
 - AI-fluent. I design lessons and small tools with AI and teach others to do the same; I understand prompts, model behaviour, and where models go wrong.
 - Reliable and async. I work independently to deadlines from anywhere (I also tour as a musician), and I follow guidelines carefully.
-

Areas I can cover

- Dutch language: writing, editing, grammar, translation EN and NL, localisation quality.
 - Education and pedagogy: lesson content, explanations, tutoring dialogues, rubrics.
 - Creative and media: writing, design thinking, arts education.
 - Accessibility and plain language: readability, inclusive tone, cognitive load.
 - General knowledge and reasoning evaluation, and ranking of model responses.
-

Where to apply, and what each wants

- Mercor: expert talent network, among the highest pay for subject-matter experts. Wants a strong CV and LinkedIn, plus a screening interview. Lead with education, Dutch and writing.

- Outlier (Scale AI): broad, 30+ languages including Dutch. Sign up, complete the assessments, then pick projects. Strong for language and education tasks.
 - Mindrift (Toloka): expert-led AI projects; profile plus skills tests.
 - Alignerr (Labelbox): expert evaluation projects; application and screening.
 - HiredBuddy: rolling out across Europe in 2026; register early.
 - jazzier.nl: a Dutch portal that aggregates AI-training jobs; useful for nl-specific gigs.
-

Apply checklist

1. Use the tailored CV and this profile text for the bio and about fields.
 2. Link LinkedIn (linkedin.com/in/stormkevin) and kevinstorm.eu.
 3. Select expertise: Education, Dutch language, Writing, plus Arts and Creative.
 4. Do the grammar and writing assessments carefully; they gate the best-paid work.
 5. Be honest about availability, for example ten to twenty flexible hours a week, async.
-

Honest notes

- Acceptance and task flow vary. Treat it as a portfolio of two or three platforms, not a single job.
- Pay and volume fluctuate. The language plus education combination is among the steadier, better-paid niches.
- A legitimate platform never charges you to join. They pay you, not the other way around.
