

STORMSTUDIO CURRICULUM

Gamification & Immersive Learning

A complete teacher-training course by Kevin Storm

A quick hello

Hi, I'm Kevin. I came into teaching sideways, through music. I still tour with bands, and somewhere along the way I fell hard for the classroom and never left. For the last eleven years I've made creative, hands-on lessons for schools all over the Netherlands, and I'm at my happiest with the kids who don't quite fit the standard mould.

I wrote this course because the gamification training I gave for international teachers in Amsterdam kept getting asked for long after it was over. So I rebuilt it, sharpened it, and put everything I actually do into one box you can pick up and run. It's tested in real classrooms, not a slide deck about theory.

What's in the box

Everything you need to run the course: the facilitator manual, the slide deck, a participant workbook with assignments, step-by-step tutorials, a source list, and this guide. Give it live, give it online, or just work through it yourself. It grew out of the two-day course I delivered at Mediacollege Amsterdam (the Erasmus+ "Digi-Eng" project), rebuilt and expanded for 2026.

KEY POINT

One course in a box. No extra licences needed to run it, beyond the free or low-cost classroom tools it teaches.

Who this course is for

- Schools and school boards running a study day (studiedag) or a year-long professionalising track for their team.
- Course providers who want a proven, ready-made course to deliver.
- Cultuureducatie and PD organisations (CmK coordinators, arts-education hubs, library networks) that book trainers and want reusable material.
- Individual teachers and trainers who want to run it themselves or upskill.

What each part is for

#	Component	What you use it for	Approx. pages
00	Welcome & course guide (this document)	The map: read first	5
01	Facilitator / Trainer Manual	Delivering it, block by block	12
02	Slide Deck (2 days)	Front of room	20+ slides
03	Participant Workbook + Assignments	One per attendee	12
04	Tutorials & Source List	Hands-on building	10
S1	AI in Education	The AI module	8
S2	Game Design with Delightex	The game-design module	9
S3	Inclusive Gamification	The inclusion module	6

All components share one visual identity and can be printed or used on screen.

How you can run it

The course is deliberately modular. The full two-day course is the heart of it (Components 00 to 04), and each of the three modules also stands on its own as a half-day or a single session.

The full course. Gamification in Education, the complete two-day programme.

Deliver it live, as four online half-days, or self-paced.

The three modules, each self-contained with its own slides, workbook pages, tutorials and assignments:

- AI in Education, practical AI for teachers: designing, differentiating and producing classroom material fast, plus AI literacy for students.
- Game Design with Delightex, a full immersive-creation track built around Delightex (formerly CoSpaces Edu): students build 3D worlds and games, code them with CoBlocks, and step into them in AR/VR. Includes tutorials and links to the Delightex approach, and ready-to-run lesson designs around the platform.
- Inclusive Gamification, designing game-based learning that works for special-needs and mixed-ability groups.

What teachers walk away with

- A finished, usable thing. Every participant builds one real, playable

gamified lesson of their own. That is the point of the whole course.

- A way of working, not just a technique: design a lesson fast with a little AI, bring it alive with game design, and make it work for every learner.
- The inclusion method, so game-based learning reaches the students who are usually left out, not just the keen ones.
- Something tested. This was delivered to international teacher groups and rated highly before it ever became a download.

What you need to run it

- The materials in this package (included).
- The free or low-cost classroom tools it teaches (all listed in Component 04).
- A room or a video call. That is all.

Continue to Component 01 (Facilitator Manual) to see exactly how it runs.
